TMS COMPONENT PACK
DEVELOPERS
QUICK START GUIDE

Contents

Supported Delphi and C++Builder versions

The TMS Component Pack Pro supports following development environments:

Borland Delphi 7 (Professional, Enterprise, Architect)
Borland Delphi 2006 (Professional, Enterprise, Architect)
Borland Delphi 2007 (Professional, Enterprise)
CodeGear Delphi 2009 (Professional, Enterprise)
Embarcadero Delphi 2010
Embarcadero Delphi XE
Embarcadero Delphi XE2
Embarcadero Delphi XE3

Borland C++Builder 2006 (Professional, Enterprise)
Borland C++Builder 2007 (Professional, Enterprise)
CodeGear C++Builder 2009 (Professional, Enterprise)
Embarcadero C++Builder 2010
Embarcadero C++Builder XE
Embarcadero C++Builder XE2
Embarcadero C++Builder XE3

The TMS Component Pack Pro can be simultaneously installed and used on multiple development environments on a single machine.

Please see http://www.tmssoftware.com/site/tmspcklist.asp for info on what components are supported for what IDEs.

TMS Component Pack is available as VCL component set for Win32/Win64 application development.

Supported Operating Systems

Windows 98
Windows Millenium
Windows 2000
Windows XP
Windows 2003
Windows Vista
Windows 2008
Windows 7
Windows 8

Installation

1. Uninstall any previous versions, trials or separate components

Make sure to first uninstall any possible previous version of the TMS Component Pack or any component part of the TMS Component Pack that might have been separately installed. A correct uninstall means:

- Remove the package through Component, Install packages …, Remove
- Delete ALL component DCU, OBJ, HPP, PAS, BPL, BPI, DCP, LIB files
- Remove the path from the library path via Tools, Environment options, Library, Library path

2. Automatic install (recommended)

For Delphi 7,2006,2007,2009,2010,XE,XE2,XE3 and C++Builder 2006,2007,2009,2010,XE,XE2,XE3 the installer automatically installs components, help files, documentation & sample applications. The installer is available for download after login on our website with your registration email & code. In case a previous version was already automatically installed, the installer will first uninstall the old version. The installer requires a working internet connection (connects via http to www.tmssoftware.com on port 80 to verify & activate the license). Make sure any firewall or anti virus software is not blocking the access to SETUP.EXE. In case of persisting problems with the internet connection, a manual install can be performed for Delphi 7,2006,2007,2009,2010,XE,XE2,XE3 & C++Builder 2006,2007,2009,2010,XE,XE2,XE3 by following instructions in INSTALL.TXT included in the full source distribution.

3. Manual install (deprecated)

3.1 Run the installer but uncheck ALL Delphi or C++Builder versions detected

3.2 Setting library paths

Under Tools, Environment Options, Library, Library path, add the directory where the TMS components have been installed and the subdirectory XlsAdapter to the library path, ie:

{$TMSDIR}
and
{$TMSDIR}\XlsAdapter

3.3**. Install with project groups (recommended)**

In Delphi or C++Builder, select from the menu File, Open and browse for the appropriate project group file:

Delphi 7 : TMSD7.BPG
Delphi 2006 : TMSD2006.BDSGROUP
Delphi 2007 : TMSD2007.GROUPPROJ
Delphi 2009 : TMSD2009.GROUPPROJ
Delphi 2010 : TMSD2010GROUP.GROUPPROJ
Delphi XE : TMSD2011GROUP.GROUPPROJ
Delphi XE2 : TMSDXE2GROUP.GROUPPROJ
Delphi XE3 : TMSDXE3GROUP.GROUPPROJ

C++Builder 2006 : TMSC2006.BDSGROUP
C++Builder 2007 : TMSC2007.GROUPPROJ
C++Builder 2009 : TMSC2009.GROUPPROJ
C++Builder 2010 : TMSC2010GROUP.GROUPPROJ
C++Builder XE : TMSC2011GROUP.GROUPPROJ
C++Builder XE2 : TMSCXE2GROUP.GROUPPROJ
C++Builder XE3 : TMSCXE3GROUP.GROUPPROJ

In the project group, right-click each of the packages and choose "Install"

Important note: when using Borland Developer Studio 2006, 2007 or CodeGear RAD Studio 2009, it is important to start the IDE with BOTH Delphi & C++Builder personalities if you want to install the components for the C++ personality. After install, you can start the IDE with the C++ personality only.

3.4. Install with packages

In Delphi or C++Builder, select from the menu File, Open and browse for the appropriate package file:

Runtime packages
Delphi 7: TMSD7PERS.DPK (Personal)
Delphi 7: TMSD7.DPK & TMSEXD7.DPK (Professional, Enterprise, Architect versions)
Delphi 2006: TMSD2006.bdsproj & TMSEXD2006.bdsproj (VCL Win32 support)
Delphi 2007: TMSD2007.dproj & TMSEXD2007.dproj (VCL Win32 support)
Delphi 2009: TMSD2009.dproj & TMSEXD2009.dproj (VCL Win32 support)
Delphi 2010: TMSD2010.dproj & TMSEXD2010.dproj (VCL Win32 support)
Delphi XE: TMSD2011.dproj & TMSEXD2011.dproj (VCL Win32 support)
Delphi XE2: TMSDXE2.dproj & TMSEXDXE2.dproj (VCL Win32/Win64 support)
Delphi XE3: TMSDXE3.dproj & TMSEXDXE3.dproj (VCL Win32/Win64 support)

C++Builder 2006 : TMSC2006.bdsproj & TMSEXC2006.bdsproj (VCL Win32 support)
C++Builder 2007 : TMSC2006.cbproj & TMSEXC2007.cbproj (VCL Win32 support)
C++Builder 2009 : TMSC2009.cbproj & TMSEXC2009.cbproj (VCL Win32 support)
C++Builder 2010 : TMSC2010.cbproj & TMSEXC2010.cbproj (VCL Win32 support)
C++Builder XE : TMSC2011.cbproj & TMSEXC2011.cbproj (VCL Win32 support)
C++Builder XE2 : TMSCXE2.cbproj & TMSEXCXE2.cbproj (VCL Win32/Win64 support)
C++Builder XE3 : TMSCXE3.cbproj & TMSEXCXE3.cbproj (VCL Win32/Win64 support)

After opening the package file, choose Compile and after compilation, select Install. The TMS Components will appear on several tabs in the component palette.

Installing support for native XLS read/write capabilities is installed by installing following additional package file:

Delphi 7 : TMSXLSD7.DPK
Delphi 2006 : TMSXLSD2006.bdsproj
Delphi 2007 : TMSXLSD2007.dproj

Delphi 2009 : TMSXLSD2009.dproj
Delphi 2010 : TMSXLSD2010.dproj
Delphi XE : TMSXLSD2011.dproj
Delphi XE2 : TMSXLSDXE2.dproj
Delphi XE3 : TMSXLSDXE3.dproj

C++Builder 2006 : TMSXLSC2006.bdsproj
C++Builder 2007 : TMSXLSC2007.cbproj
C++Builder 2009 : TMSXLSC2009.cbproj
C++Builder 2010 : TMSXLSC2010.cbproj
C++Builder XE : TMSXLSC2011.cbproj
C++Builder XE2 : TMSXLSCXE2.cbproj
C++Builder XE3 : TMSXLSCXE3.cbproj

Installing design time support is done by following package files:

Design time packages
Delphi 7 : TMSDED7PERS.DPK (Personal)
Delphi 7 : TMSDED7.DPK (Professional, Enterprise, Architect versions)
Delphi 2006 : TMSDED2006.bdsproj (VCL Win32 support)
Delphi 2007 : TMSDED2007.dproj (VCL Win32 support)
Delphi 2009 : TMSDED2009.dproj (VCL Win32 support)
Delphi 2010 : TMSDED2010.dproj (VCL Win32 support)
Delphi XE : TMSDED2011.dproj (VCL Win32 support)
Delphi XE2 : TMSDEDXE2.dproj (VCL Win32/Win64 support)
Delphi XE3 : TMSDEDXE3.dproj (VCL Win32/Win64 support)

C++Builder 2006 : TMSDEC2006.bdsproj (VCL Win32 support)
C++Builder 2007 : TMSDEC2007.cbproj (VCL Win32 support)
C++Builder 2009 : TMSDEC2009.cbproj (VCL Win32 support)
C++Builder 2010 : TMSDEC2010.cbproj (VCL Win32 support)
C++Builder XE : TMSDEC2011.cbproj (VCL Win32 support)
C++Builder XE2 : TMSDECXE2.cbproj (VCL Win32/Win64 support)
C++Builder XE3 : TMSDECXE3.cbproj (VCL Win32/Win64 support)

After opening the package file, choose Compile and after compilation, select Install.

Notes for TeeChart Pro users:

The TMS Component Pack comes with support for the default installed TeeChart in Delphi and C++Builder. If you have installed another version of TeeChart, open the TMS Component Pack package file, remove TEE*.* from the requires list of the package an press Install. Delphi or C++Builder will then automatically add the correct TeeChart library reference to the TMS Component Pack package file.

3.5. Installing online help

Go through menu Help, Customize and add following file to the Index tab:

Delphi 7   : TMSPACKD7.HLP
Delphi 2006 : Close the IDE, run RegHelp2 /I TMSPACKdBds4W and restart the IDE
Delphi 2007 : Close the IDE, run RegHelp2 /I TMSPACKdBds5W and restart the IDE
Delphi 2009 : Close the IDE, run RegHelp2 /I TMSPACKdRS2009W and restart the IDE
Delphi 2010 : Close the IDE, run RegHelp2 /I TMSPACKdRS2010W and restart the IDE
Delphi XE : Close the IDE, run RegHelp2 /I TMSPACKdRSXE and restart the IDE
Delphi XE2 : Close the IDE, run RegHelp2 /I TMSPACKdRSXE2 and restart the IDE
Delphi XE3 : Close the IDE, run RegHelp2 /I TMSPACKdRSXE3 and restart the IDE

C++Builder 2006 : Close the IDE, run RegHelp2 /i TMSPACKbBds4W and restart the IDE
C++Builder 2007 : Close the IDE, run RegHelp2 /I TMSPACKdBds5W and restart the IDE
C++Builder 2009 : Close the IDE, run RegHelp2 /I TMSPACKdRS2009W and restart the IDE
C++Builder 2010 : Close the IDE, run RegHelp2 /I TMSPACKdRS2010W and restart the IDE
C++Builder XE : Close the IDE, run RegHelp2 /I TMSPACKdRSXE and restart the IDE
C++Builder XE2 : Close the IDE, run RegHelp2 /I TMSPACKdRSXE2 and restart the IDE
C++Builder XE3 : Close the IDE, run RegHelp2 /I TMSPACKdRSXE3 and restart the IDE

For Delphi 7 it is required to first put the TMSPACK.ALS file in the {$DELPHI}\Help directory.

3.6. Installing the component pack in multiple development environments

The recommended procedure to install the component pack in different Delphi or C++Builder environments on a single machine is to unzip the TMS Component Pack into a different folder for each Delphi or C++Builder version and to use as such a different library path for each Delphi or C++Builder version.

8. Refer to README.TXT for latest remarks

In the TMS Component Pack Pro, a file README.TXT is included that contains latest remarks with respect to the install of the TMS Component Pack Pro.

Updates

The TMS Component Pack Pro comes with a full version cycle of free updates. A full version cycle means that from version x.y to version x+1.y, the updates are free. For example, if a registration starts at version v2.5, updates are free till version v3.5. The updates for the TMS Component Pack are made available at least monthly. The latest date of the updates can be seen after login on our website (see next section). This date reflects the exact file date of the latest update.

Note that when a new component or component update has been released that is part of the TMS Component pack, there might be some delay before the full TMS Component pack update is available that contains this new component or component update. This is due to the far more extensive testing and build procedure for the complete TMS Component Pack. If such an update is urgently required, it can be requested by email in the time before the full TMS Component pack update is released. Note that there is always a tentative release date for the next TMS Component Pack update displayed on the registered users page on the website.

The latest version is always available to active registered users. Please make a backup of the software as we do not archive or make older versions available.

Support

TMS Component Pack Pro registered users have priority support on the special email:
support@tmssoftware.com

For peer to peer support for registered users only, a newsgroup is available. Details about the newsgroup server and login can be found on the registered users page after login on our website.
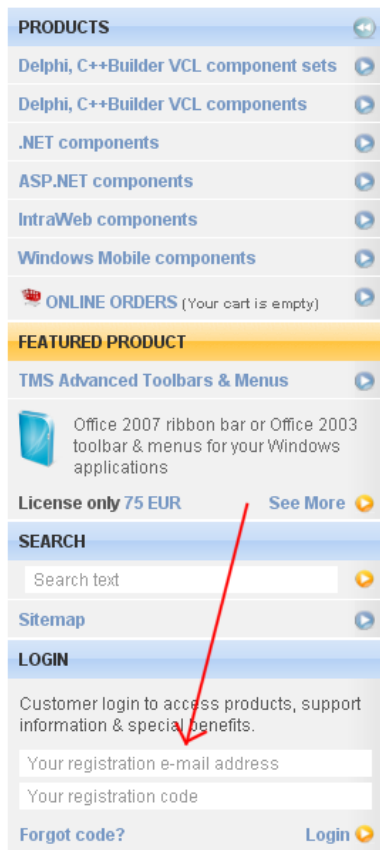

Website login

Registered users of the TMS Component Pack Pro receive a code with which it is possible to login on the website to obtain:

- Free updates for a full version cycle of the components.
- Discount offers on other products
- Access to additional documentation
- Access to samples projects
- Change registration email
- Information for peer to peer support newsgroup access

Login on the website is done with:

- Email with which you registered the TMS Component Pack
- Code that is sent by email with the first registered version

Important notes

Keep this email and code in a safe place.

If for some reason, your registration email address changes, the only way to have this updated is by sending email to TMS software to request for a change. The email **must** be sent from the original email address and specify the new address to change to.

License agreement

The TMS Component Pack is available with two licensing schemes, a single developer license and a site license. The details of the two license types are below:

TMS Component Pack single developer license agreement

The single developer license of the component gives you the right to:

- Using the component for development of applications or any type of software module in general by a single developer within the company holding the license.
- Sell any commercial compiled application with the control, published by the company holding the license
- Make modifications to the source code of component for own use.
- Use the component and source code on all development systems used by the developer assigned by the company holding the license.
- Request future versions of the component at any time either through the web or by email for a full version cycle of the component. After expiry of the registration TMS software can no longer provide any old version of software, documentation or samples. TMS software is not a backup service and expects backups to be made by the licensed user.
- Access to priority email support by the single developer assigned by the company holding the license.
- Sell any number of applications in any quantity without any additional run-time fees or royalties required.

The license agreement prevents you from:

- Distributing parts or full source code of any component from TMS software.
- Using parts or full source code of components from the TMS software for creating any type of other components that are distributed or sold with or without source code.
- Changing the source code of any component from TMS software and sell or distribute this as a modified product.
- Creating a descendant compiled product such as OCX or ActiveX control and sell or distribute this as a product.
- Using the control in applications sold with different publisher name than the company holding the license.
- Transfer the license to any other developer than the original registered developer
- Using the components by multiple developers in the company holding the license
- Transfer the license to any other developer than the original registered developer
- Using the components by multiple developers in the company holding the license

TMS Component Pack site license

The site license of the component gives you the right to:

- Using the component for development of applications or any type of software module in general by a single developer within the company holding the license.
- Sell any commercial compiled application with the control, published by the company holding the license
- Make modifications to the source code of component for own use.
- Use the component and source code on all development systems used by the developer assigned by the company holding the license.

- Request future versions of the component at any time either through the web or by email for a full version cycle of the component. After expiry of the registration TMS software can no longer provide any old version of software, documentation or samples. TMS software is not a backup service and expects backups to be made by the licensed user.
- Access to priority email support by the single developer assigned by the company holding the license.
- Sell any number of applications in any quantity without any additional run-time fees or royalties required.
- Change at any time the number of developers using the TMS software components within the company holding the license.
- Notify TMS software at any time to allow new developers within the company to access the priority email support.
- Allow any number of developers within the company holding the license to access the web based interface for obtaining product updates.

The site license agreement prevents you from:

- Distributing parts or full source code of any component from TMS software.
- Using parts or full source code of components from the TMS software for creating any type of other components that are distributed or sold with or without source code.
- Changing the source code of any component from TMS software and sell or distribute this as a modified product.
- Creating a descendant compiled product such as OCX or ActiveX control and sell or distribute this as a product.
- Using the control in applications sold with different publisher name than the company holding the license.
- Transfer the license to any other developer not working for the company holding the license.

Termination of license

The license agreement terminates immediately after violation of any of the terms and conditions described. A termination of the license means that the company has no longer any rights to use the components for development, sell applications using the components, obtain free updates of the components and is no longer entitled to email support or any other form of support.

The company or developer holding the license is responsible for respecting the terms and conditions of the license agreement and shall thus make sure that no other person has access to the TMS Components to use these for any purposes that violate the license agreement.

Component overview

TMS GRID CONTROLS

TAdvStringGrid:

TAdvStringGrid is a stringgrid with lots of extra possibilities : insert / delete / move rows & colums, copy / paste to clipboard, save / load to internal file format, save / load / append to CSV file, save / load to XLS file, save / load to stream, save to HTML with colors if specified, save to Word DOC file, save to formatted textfiles, load from MDB tables, cell horizontal & verical alignment, cell color, cell font color,read-only cells, automatic printing with optional title, pagenummer, date, time, border, header & footer, font control and auto fit to page, automatic column sizing, column sorting (alphabetic, numeric, date, time, custom), full sort when clicking on column header + arrow indication (like Internet mail), automatic goto cell based on sorted column when key pressed, event handler for setting hint of each cell, automatic selection of next cell after edit, insert / delete key to insert or delete rows, automatic text display appended with '...' when text does not fit in column, automatic wordwrapping cells, automatic saving of user resized columns in registry of INI file, proportional scrollbars, hide / unhide columns & rows, search capabilities with options for case sensitive, full/partial, regular expressions, bitmaps, icons, imagelist elements, fixed row/column at bottom / right side of grid, intellimouse scroll, zoom & pan support with mousewheel, enhanced inplace editor with left & right aligned text input, shows URLs and handles URL clicks, inplace editors : combobox, datepicker, timepicker, spinedit, ellipsedit, checkbox, buttons, autolookup edits, numeric edit, float edit, capital edit, mixedcase edit, radiobuttons, custom inplace editors, enhanced row and column dragging, free rotated text in any cell, disjunct row selection in rowselect mode, OLE drag & drop source + target, columnsizing enable/disable per column, tiled or fixed background image, dynamic scroll hints, expand / contract rows with nodes, grouping and grouped sorting, cell merging, unicode cell display, edit, print & sort support

TAdvColumnGrid:

TAdvColumnGrid adds easy design-time and run-time column oriented property control to TAdvStringGrid.

TAdvGridFindDialog:

Find dialog that can be attached to TAdvStringGrid for find text in the grid and control over all the find options in the grid.

TAdvGridReplaceDialog:

Find and replace dialog that can be attached to TAdvStringGrid for find text in the grid and control over all the find and replace options in the grid.

TAdvGridHTMLSettingsDialog:

Dialog through which the various properties can be set that control the export to HTML of TAdvStringGrid.

TAdvGridPrintSettingsDialog:

Dialog through wich the various properties can be set that control printing of TAdvStringGrid.

TAdvPreviewDialog:

Dialog that allows a quick & easy preview of a grid printout

TCapitalCheck:

Example component for the cell edit check and validation architecture. It can be used as a sample that shows how to link to a spell check engine.

TChartLink:

Component that is an interface between TAdvStringGrid and TChart and that allows direct viewing/updating of grid information in a chart.

TDBAdvStringGrid:

Adds the capability to view, print, export datasets to TAdvStringGrid

TMS PLANNER CONTROLS

TPlannerCalendar, TDBPlannerCalendar:

Highly configurable single/multi-select month calendar that can display events with hints. Data-aware and non data-aware version.

TPlannerCalendarGroup:

Multi-month version of TPlannerCalendar

TPlannerDatePicker, TDBPlannerDatePicker:

Dropdown version of TPlannerCalendar. Data-aware and non data-aware version.

TPlanner, TDBPlanner:

Data-aware and non data-aware planner component for interactive scheduling applications. Items can be resized / repositioned, multiline editable, multiple imagelist images, caption with time indication, readonly items, various display modes : day (5,6,10,15,30,60 min), week, month, multi day / multi resource mode, timeline, custom grid displays. Controllable active day start, active day end, day start, day end, Events for insert, delete, left click, right click of items, Overlapped / non overlapped items, HTML export, save to streams, printing, alarms, spell check support

TDBDaySource:

TDBPlanner dataset interface for day mode planner views

TDBPeriodSource:

TDBPlanner dataset interface for period mode planner views

TDBMonthSource:

TDBPlanner dataset interface for month mode planner views

TDBWeekSource:

TDBPlanner dataset interface for week mode planner views

TDBHalfDayPeriodSource:

TDBPlanner dataset interface for half day period mode planner views

TDBTimeLineSource:

TDBPlanner dataset interface for timeline mode planner views

TAddictPlannerCheck:

Interface to Addict spell checker for spell checking edited items in the planner component

TCapitalPlannerCheck:

Sample planner item edit check/validation component

TAlarmEmail:

Sample alarm component that sends email as alarm notification

TAlarmMessage:

Sample alarm component that shows a dialog box as alarm notification

TOxygenSMSAlarm:

Sample alarm component that sends SMS through the Oxygen SMS component as alarm notification

TTodoList, TDBTodoList:

Data-aware and non data-aware interactive todolist with support for inplace editing, sorting, completion, subject, notes, creation, due and completion dates.

TvCalendar:

Component to read & write vCalendar files

TMS EDIT CONTROLS

TAdvListEditor
Edit control to edit a list of values in a flexible way similar to the Microsoft Outlook or iOS email address input.

TAdvEdit, TDBAdvEdit, TAdvMaskEdit, TDBAdvMaskEdit:

Data-aware and non data-aware masked and non masked edit controls with focus color, enter to move focus, length limited input, flat style, numeric right aligned input, uppercase, lowercase, mixed case input, money, float, hex, range, input style auto focus, colored on modify, fixed suffix / prefix, automatic thousand separator,insertion, OLE drag&drop, transparency, focusborder.

TAdvComboBox:

Enhanced combobox with flat style, focus color & border

TAdvDBComboBox:

DB-aware combobox with attached label with different display values from actual DB field values

TAdvEditBtn, TDBAdvEditBtn:

Data-aware and non data-aware TAdvEdit control with embedded button.

TUnitAdvEditBtn:

TAdvEdit control with embedded button and unit dropdown selection

TAdvFileNameEdit, TAdvDirectoryEdit:

TAdvEdit with embedded button with file or directory picker

TAdvLUEdit, TDBAdvLUEdit:

Data-aware and non data-aware TAdvEdit with auto-completion based on lookup in attached string list

TAdvQueryDialog:

Input query dialog based on TAdvEdit with all its capabilities

TAdvSpinEdit, TDBAdvSpinEdit:

Data-aware and non data-aware spin edit control with added capability to spin float, time, date and hex values, to disable the edit control, to have flat spin buttons, to have a transparent or flat editor and with various increment styles.

TCheckListEdit:

Edit control with dropdown checklist

TLUCombo ,TDBLUCombo:

Data-aware and non data-aware combobox with autocompletion based on values in Items.

TLUEdit, TDBLUEdit:

Data-aware and non data-aware edit control with autocompletion based on values in attached stringlist

TEditBtn,TUnitEditBtn:

Simple edit control with embedded button and unit selection

TEditListBox:

Editable listbox

TMoneyEdit, TDBMoneyEdit:

Data-aware and non data-aware edit control with dropdown calculator

TAdvMoneyEdit:

TAdvEdit control with dropdown calculator

TMS Curvy Controls:

Rounded Apple OSX style edit, combobox, panel, memo

TMS INSPECTORBAR CONTROLS

TInspectorBar:

Flexible highly configurable InspectorBar combining an large-icon & small-icon Outlook style bar, property inspector style bar, and toolbox bar. Property inspector has built-in support for checkboxes, edits, comboboxes, spin editors, datetime pickers, font editing, color picker .. Various shading styles for panel captions, including XP button style & bitmap effects. Various hover effects

TDBInspectorBar:

Data-aware version of InspectorBar with optional built-in navigator

TINIInspectorBar:

InspectorBar for editing INI files

TRTTIInspectorBar:

InspectorBar that features run-time component editing through RTTI.

TMS HTML FORMATTING CONTROLS

THTMLabel, TDBHTMLabel:

Data-aware and non data-aware label with HTML formatting capabilities

THTMLCheckbox, TDBHTMLCheckbox:

Data-aware and non data-aware checkbox with HTML formatting capabilities

THTMLRadioGroup, TDBHTMLRadioGroup:

Data-aware and non data-aware radiogroup with HTML formatting capabilities

THTMLRadioButton:

Radiobutton with HTML formatting capabilities

THTMLButton:

Button with HTML formatting capabilities and various styles

THTMLCheckGroup:

Checkbox group with HTML formatting capabilities

THTMLComboBox:

Combobox with support for HTML formatted items

THTMLHint:

Component to enable HTML formatted hints in applications

THTMLDialog:

ShowDialog replacement with support for showing messages with HTML tags

THTMLListbox:

Listbox with support for HTML formatted items

THTMLPopup:

Messenger like popup with support for HTML formatted text

THTMLTreeList:

Multi-column treeview with support for HTML formatted nodes

THTMLTreeview:

Treeview with support for HTML formatted nodes

THTMLStatusBar:

Statusbar with support for HTML panels, keyboard indicators, progress bar …

THTMLStaticText:

TStaticText component with support for HTML tags

THTMLForm:

Create dynamic runtime HTML forms with edit, checkbox, radiobutton, combobox, datetimepicker input controls

TPictureContainer:

Container that can hold JPEG, GIF, BMP, pictures for use in HTML formatted text

TMS UNICODE CONTROLS

TUNIHTMLListbox:

Listbox with support for Unicode HTML formatted items

TUNIHTMLabel:

Label with support for Unicode HTML formatted items

TUNIHTMLComboBox:

Combobox with support for Unicode HTML formatted items

TMS MENU CONTROLS

TAdvMainMenu :

Menu replacement component with various styles such as Office 2003 appearance.

TAdvPopupMenu:

Popup menu replacement component with various styles such as Office 2003 appearance.

TAdvToolBar:

ToolBar / RibbonBar component for building Office 2003, Office 2007 style toolbar / ribbon bar user interfaces.

TAdvDockPanel:

ToolBar container control

TAdvToolBarPager:

Office 2007 style toolbar container control

TAdvOfficeHint:

Office 2007 style hint control

TMS Advanced Poly List:

An extremely versatile and flexible architecture to create virtually any possible lists of items in user interfaces.

TMS WEB CONTROLS

TWebData:

Component to perform automatic information extraction from webpages, including image references and hyperlinks

TWebCopy:

Component to perform automatic download, upload of single or multiple files from via http, ftp or network

TWebImage:

A graphic control that can display JPEG and GIF files from an URL in center, topleft, topright, bottomleft, bottomright, stretched and tiled mode

TWebPost:

A component that can post text data to a web ASP, CGI or ISAPI script for various online logging purposes

TWebConnect:

Component to check the internet connection status and/or establish an internet connection

TWebUpdate:

TWebUpdate can automatically check for updated files over Internet/Intranet via FTP,HTTP or files. Can replacing running applications and DLLs. Provides various methods to customize the update process with custom messages, dialogs, file selections, status information and posting custom data to the server. Can use the ASTA binary patch technology for using very small file difference based updates.

TAstaPatchUtility:

Binary unpatching utility in case TWebUpdate is used with ASTA binary patch files

TMS MEMO CONTROLS

TAdvMemo:

Lightweight syntax highlighting memo control with gutter and capability to show breakpoints and executable code.

TDBAdvMemo:

DB-aware version of TAdvMemo

TAdvHTMLMemoStyler:

HTML syntax highlighting control for TAdvMemo

TAdvJSMemoStyler:

Javascript syntax highlighting control for TAdvMemo

TAdvWebMemoStyler:

HTML + Javascript syntax highlighting control for TAdvMemo

TAdvPascalMemoStyler:

Pascal syntax highlighting control for TAdvMemo

TAdvBasicMemoStyler:

Basic syntax highlighting control for TAdvMemo

TAdvCSSMemoStyler:

Cascading stylesheets highlighting control for TAdvMemo

TAdvSQLMemoStyler:

SQL highlighting control for TAdvMemo

TMS MISC CONTROLS

TAdvPicture:

TPicture with built-in support to render JPEG, GIF, BMP, ICO, WMF, EMF file formats

TAdvPanel:

Advanced Panel component with BMP,JPG,GIF,WMF,EMF,ICO tiled,centered, stretched background, HTML formatted text & caption, close and min/max button, moveable & sizeable.

TAdvPanelGroup:

TAdvPanel container component

TAdvPanelGroup:

TAdvPanel container component

TAdvPanelStyler:

Component to preset layout of the TAdvPanel

TAdvListView, TDBAdvListView:

Data-aware and non data-aware listview with support for formatted text, colors, subitem editing, clipboard, import and export to various file formats, printing

TAniIcon:

Component to display animated icons

TAdvProgress:

Progress bar with extra capabilities added for vertical, color, smooth progress bar style

TButtonListBox:

Listbox with buttons

TCalComp:

Popup calendar panel

TCalPanel:

Calendar panel

TColumnComboBox:

Multi-column combobox

TColumnListBox:

Multi-column listbox

TreeList:

Multi-column treeview

TAdvColorComboBox:

Colorpicker combobox

TAdvDBLookupCombo:

Multi-column DB lookup combobox

TDBAdvNavigator:

Advanced DB Navigator with GlyFX glyphs
